OPP CONCERNED SHEEP BREEDERS SOCIETY

PLEASE SEE YOUR FLOCKMASTER "MAILS" SECTION FOR DETAILS TO THE OPP SOCIETY REPORTS.

Published in February of 2017 by the Secretary. Information collected between January 1st, 2016 through December 31st, 2016 is included in this directory. Please notify the Secretary of any changes or corrections to your data or your flock's details. Please review your flock's information and let us know if it is correct. Please contact individual breeders for breeding stock information. Please also contact individual breeders for breeding stock information. Please also contact breeders about breeding stock and their records, the status of the flock, methods of evaluation, etc.

2016-2017 MEMBER DIRECTORY

Our membership represents many different breeds and many different situations. Some of us have, despite repeated trying, never had an animal test positive for ovine progressive pneumonia (OPP); some of us started with stock from a clean flock; some of us are in the process of eradicating the disease from our flocks; some of us have had to cull our entire flocks; some of us have purchased breeding stock from individuals from OPP-free flocks; some are active breeders around the office of this and other diseases within our own flocks and within the North American sheep industry as a whole.

Information is based on the Flockmaster Program, which allows individual members to keep 20 names and 2 addresses in the directory. Members may also choose to have their information not listed in the directory, or to direct owners to share their EMS. The information is as accurate as we can make it but details, statistics, and data are only as good as the information we have been provided by our members and breeders. Please contact individual breeders for breeding stock information. Please also contact individual breeders about health records and test results, the status of the flock, methods of evaluation, etc.

Click on the breeder's name in the table of contents to view breeder listings, or click here to **BREEDER LIST**.

BLACK WELSH MOUNTAIN
*Flock of 300 Black Welsh Mountain ewes. Breeding stock for sale. Breeding positions as first year ewe lambs. Flock has been tested negative for OPP and Caseous Lymphadenitis. Cultured all abortions since last 3 years and have been negative for Brucella ovis, Toxoplasma, Leptospira, Campylobacter. Have never had an OPP positive animal. Flock has been vaccinated for Clostridial diseases and BVD. Expect Leptospira, Brucella ovis, Campylobacter and Toxoplasma to be negative. Flock is Brucella ovis free. Flock has been tested and OPP positive in the past
